

Industrial Energy Efficiency Improvement Project in South Africa

ENERGY MANAGEMENT SYSTEMS IMPLEMENTATION EXPERT LEVEL TRAINING

Improve your energy performance – Cut energy costs
Reduce carbon emissions – Improve operational reliability and control

The objective of the Energy Management Systems Expert training program is to create a cadre of national experts equipped with the knowledge, skills and tools needed to support the adoption and implementation in industry of energy management systems aligned and conforming to the ISO 50001 Energy Management Standard by providing:

Technical assistance to enterprises and coaching facility personnel in energy management systems (EnMS) development and implementation. Our trained national experts are able to:

- a) Promote the implementation of sustainable Energy Management Systems and ISO 50001 certification to top management.
- b) Support and guide enterprises in the systematic implementation an ISO 50001 aligned energy management system to improve their energy performance.
- c) Develop the capacity in industry to implement and sustain Energy Management Systems.
- d) Conduct ½ day awareness raising workshops for factory management and to present the range of UNIDO technical and financial assistance programmes and
- e) Conduct 2-day Advanced End-User training for enterprise energy/SHEQ Managers and impart an understanding of Energy Management System implementation.

WHO SHOULD ATTEND

The Energy Management training is aimed at energy managers, maintenance managers, SHEQ managers, plant engineers, utility managers, management system auditors and engineering consultants who have a basic understanding of energy management systems. There will be group exercises and problem solving.

WHEN & WHERE

Durban	12 -14 May 2014
